Course: Data Administration

Hands-on Activity

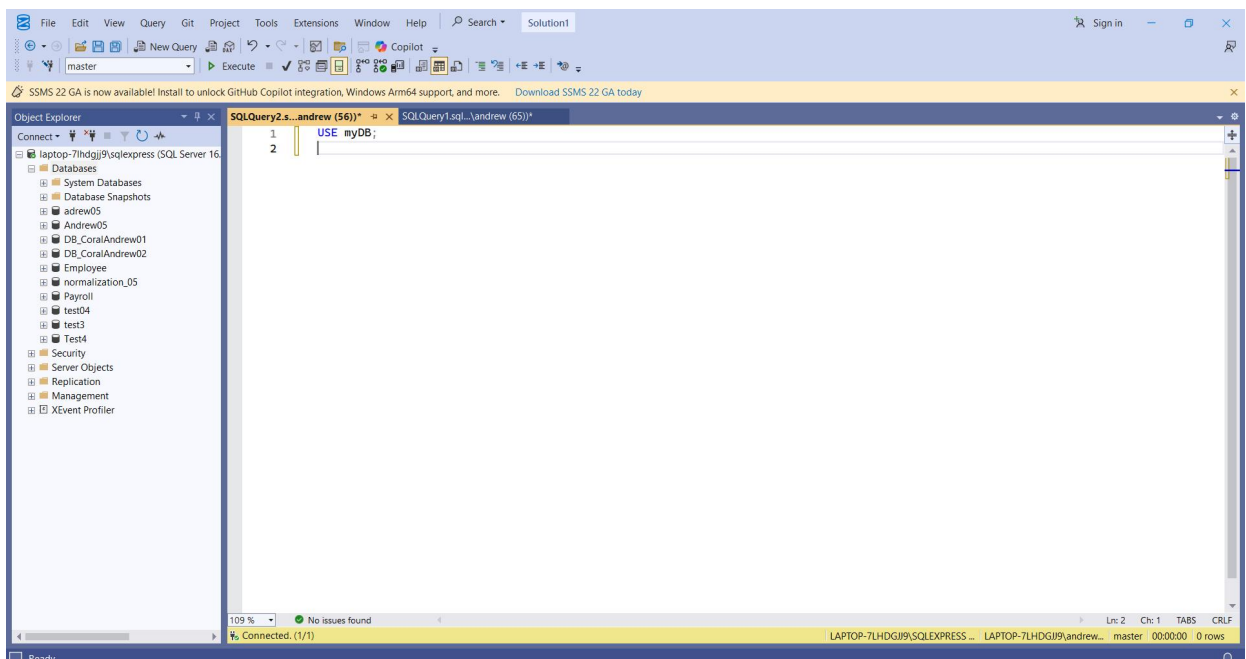

SQL Data Definition

Procedure:

1. Click **New Query** and type an **SQL statement** to create a database named **myDB**.
2. Click the **Execute** button or press **F5** to see the new database in the **Object Explorer**

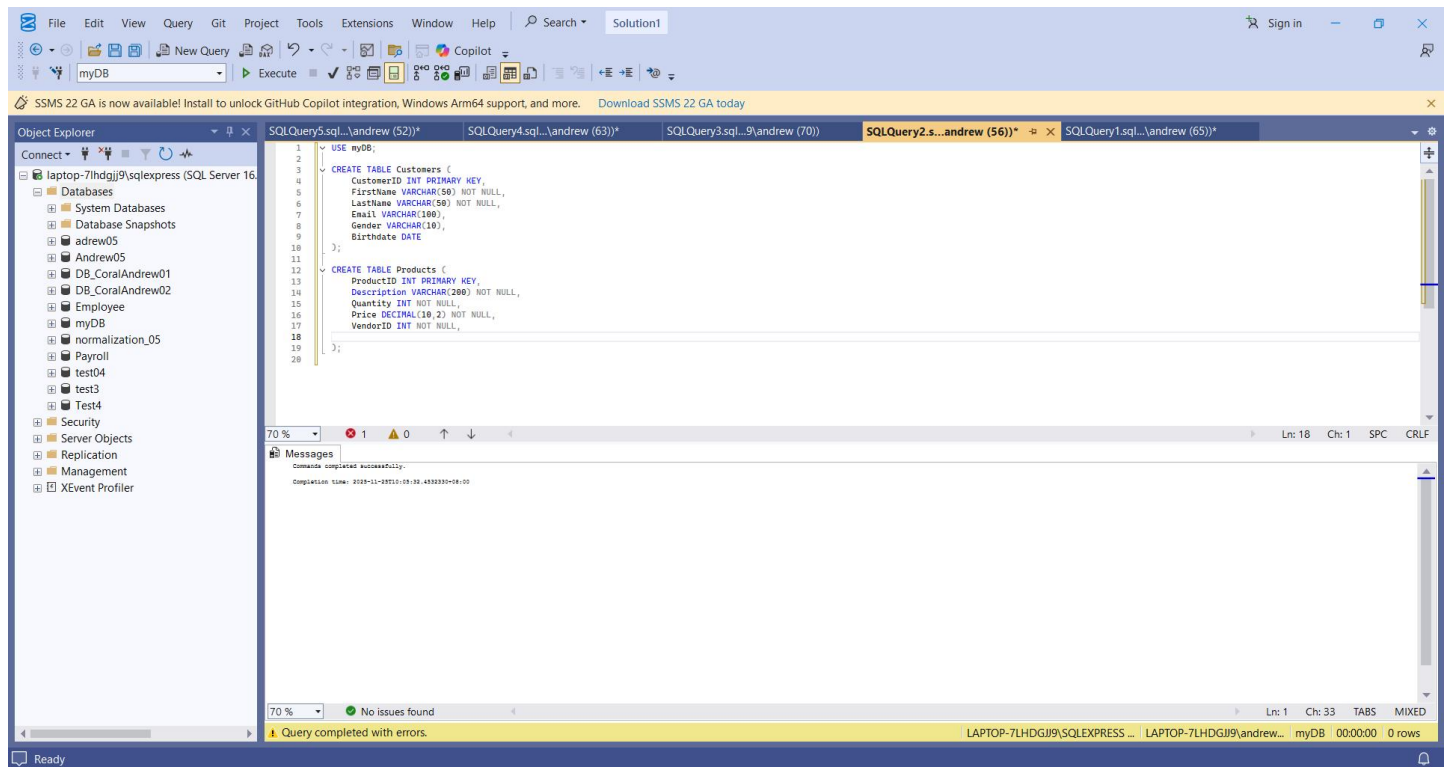

3. Create queries to perform the next steps. Before writing the queries, type **USE myDB;** in the first line to use the database you have created in Step 1.

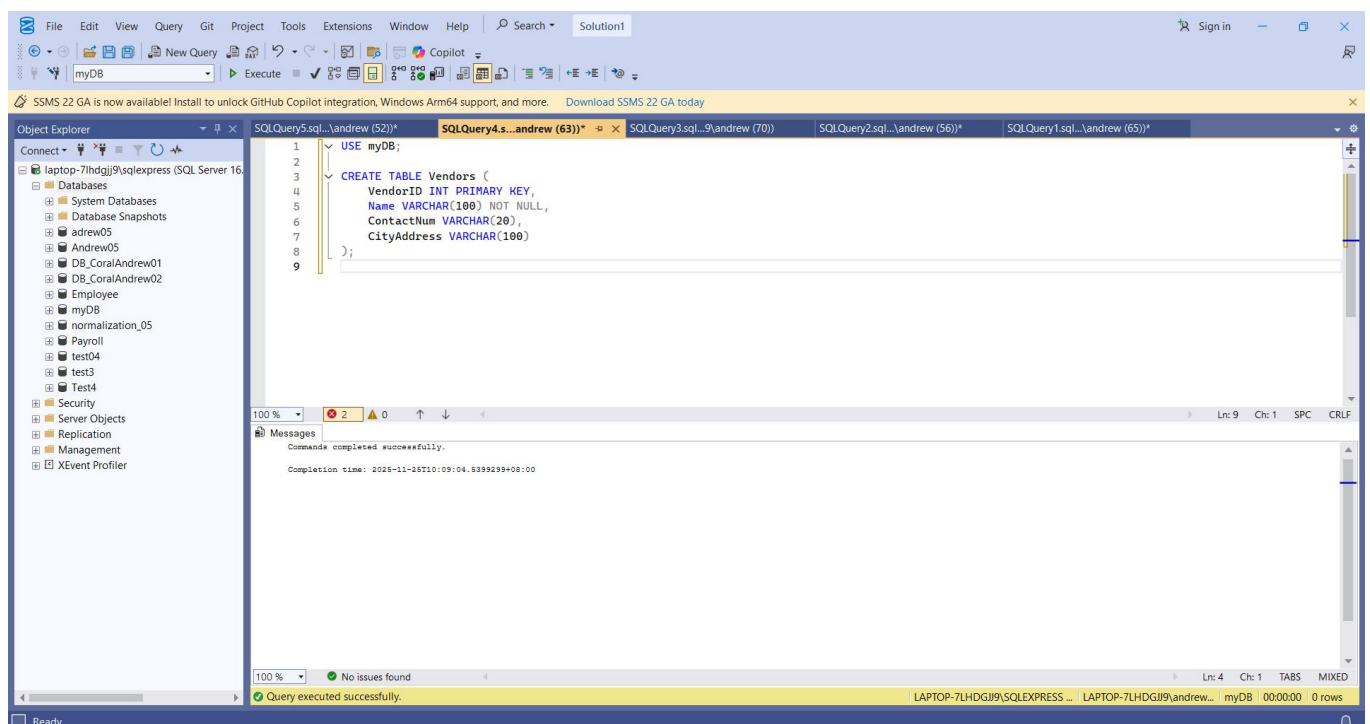

4. Create the tables named **Customers** and **Product**. Set the appropriate data types and determines which one are supposed to be **NOT NULL**.

Customers: CustomerID (Primary Key), FirstName, LastName, Email, Gender, Birthdate

Products: ProductID (Primary Key), Description, Quantity, Price, VendorID

5. Create another table named **Vendors** with columns: **VendorID** (Primary Key), **Name**, **ContactNum**, **City Address**.

6. Set **VendorID** from the **Vendor** table as foreign key in the **Products** table.
