

LESSON WEEK 10-12

SEATWORK #4- Evolus Pencil

Part 1: A Simple Login Screen

1. Open Evolus Pencil: Launch the application. Create a new project or open an existing one.
2. Set Up the Page: From the left-hand panel, choose a page size (e.g., Web, iPhone, Android, etc.). Add a new page and name it something like "Login Screen".
3. Add a Title: Drag and drop a Text element from the Common Shapes or Web UI library. Double-click to edit the text and change it to "Login". Increase the font size and center it near the top of the screen.
4. Add Username and Password Fields: Drag two Text Input elements (or Textbox controls) to the canvas. Label them appropriately: Above the first textbox, add a label "Username". Above the second textbox, add a label "Password". Use a Password Field for the password textbox (it may look like a textbox with dots or a hidden input).
5. Add a Login Button: From the shapes panel, drag a Button component below the text fields. Label it "Login". Center it under the password field for good alignment.
6. Add a "Forgot Password?" Link: Use a small Text element and write "Forgot Password?". Place this below the "Login" button. Style it to look like a hyperlink (e.g., blue color, underlined). Optionally, link it to another wireframe page if Evolus Pencil version supports linking.
7. Tidy and Align: Use alignment tools in Evolus Pencil to center all elements. Maintain equal spacing between fields and buttons. Group related elements if needed for better organization.

Part 2: A Basic E-commerce Product Page

Step 1: Open Evolus Pencil

Launch the application and start a new project. Choose a web or mobile template based on your target platform.

Step 2: Set Up the Page Layout

Drag a rectangle or page container onto the canvas to define the main layout area of the product page. Adjust margins to give the content room to breathe.

Step 3: Add the Product Image

Insert a large image placeholder at the top-left or center of the page. Resize it to be visually dominant and label it “Product Image” for clarity.

Step 4: Insert the Product Name

Place a text element next to or just below the image. Use a large, bold font to make the product name stand out. Label it “Product Name.”

Step 5: Write a Short Description

Below the product name, add another text element for a brief description. Use a smaller font to differentiate it from the title.

Step 6: Display the Price

Add a text element under the description to show the product price. Use bold or colored text to highlight it, e.g., “₱999.00.”

Step 7: Create the “Add to Cart” Button

Drag a button element below the price. Label it “Add to Cart” and make it clearly visible and easy to click.

Step 8: Add the Customer Reviews Section

At the bottom of the page, draw a box or panel labeled “Customer Reviews.” Include placeholder text or quote icons to represent sample reviews, and optionally add star icons for ratings.

Step 9: Final Adjustments

Align all elements neatly, maintain consistent spacing and font styles, and save or export the wireframe when done.

Bamboo Echo Wireless Speaker

Description: A compact, eco-friendly Bluetooth speaker made from sustainable bamboo, offering clear sound and a stylish design for on-the-go music lovers.

Price: ₱1,499.00

Add to Cart

Part 3: A Simple Navigation Bar

Step 1: Open your project in Evolus Pencil and create a new page or open your existing canvas.

Step 2: From the left panel, drag a **rectangle** onto the top of the canvas to serve as the navigation bar background. Resize it to stretch horizontally across the top.

Step 3: To represent the **logo**, drag a **circle** or **square shape** onto the left side of the rectangle. This will act as a placeholder for the company's logo.

Step 4: Use the **Text tool** to add the menu item labels "Home," "About," and "Contact."

Step 5: Position the text elements evenly spaced on the right side of the navigation bar. You can align them horizontally for a clean layout.

Step 6: Optionally, group the shapes and text together to keep the navbar organized.
